

WyzeTemp® Chef App Instructions

The WyzeTemp® Chef app allows users to set up and configure their Wyze Temp® Chef display. The app is primarily used for setup to allow the display to capture temperature data from Wyze Temp® probes in commercial settings. The configuration allows 1, 2, or several probes to be monitored for various applications including rotisseries, commercial BBQ ovens and smokers, as well as blast chillers.

Single probe with dual temps Quad Colored probes for BBQ Single probe for Chilling

- Enter Wi-Fi credentials for online data viewing/archiving
- Enable/Disable audio alerts
- Enable/Disable Auto-Pairing the probes to the reader while charging
- “Safe” temperature changes the status LED from Blue (cold) to Amber
- “Done” temperature changes the status LED from Amber to Green (time to remove the product)
- Select a single probe, dual probe set, multiple (3-12) probes, or up to four colored probes.
 - The S/N on the probe must be entered for each color. Then if you de-select auto-pairing, the probe numbers do not have to be re-entered for additional cooks.
 - Example:
 - Red for Brisket
 - Green for Pork
 - Yellow for Chicken
 - Blue for Beef.
- To send settings to the control select the “Submit to Wyze Temp Chef” button at the bottom
